

Control weeds with one hit of Roundup Pro.

Roundup PRO® herbicide, with PROformance technology is moved right into the leaves and roots of weeds. Apply it once to a weed and it won't come back. That means fewer call backs for you!

Trim & Edge

Roundup PRO herbicide goes where mechanical trimmers can't, so use it along fence lines, in sidewalk cracks, at curbside and around building perimeters.

Shrub Beds

Hand weeding takes time. String trimmers disturb the mulch layer. Neither attacks the roots. Roundup PRO kills the roots and eliminates time-consuming call backs!

Turf Renovation

Roundup PRO destroys the entire plant for long-lasting control, unlike mechanical renovation which can bring seeds to the surface and make the problem worse. You can also re-seed or sod directly onto treated areas.

Brush & Vines

Mechanical brush removal encourages even denser regrowth. Roundup Pro prevents regrowth because it's absorbed into the roots of weeds. And it's effective against a broad-spectrum of tough brush, weeds and vines.

How To Get Great Results From Roundup Pro.

- Do not string trim or mow before spraying
- Spray Roundup Pro directly onto leafy area until wet, without run-off
- If you accidentally spray a desirable plant, rinse it immediately with water
- Roundup PRO is rainfast in one-two hours after application
- People and pets may re-enter treated areas after spray has dried
- Compensate for hard water by always using the higher rate in the recommended range
- Early Fall applications are most effective for eliminating perennials and brush
